Alishbah Kapadia

Toronto, Ontario | Github: alishbahkap | connect.lishy@gmail.com

SKILLS

Embedded: Arduino, ESP-IDF
Languages: C/C++, Javascript, TypeScript, HTML/CSS, Python, MATLAB
Certifications & Training: AWS SAA-C03 (in progress)
Tools: Shopify, Figma, Git/Github, Claude Code, Canva, MATLAB, Microsoft Office Suite

WORK EXPERIENCE

TECHNOBIZ (Automotive Parts Software Platform) Toronto, ON
Product R&D Intern July 2026 – Present

- Conducting product research and workflow analysis for an automotive parts platform focused on automated part identification and pricing.
- Developed **30+** structured product validation test cases across two pricing model iterations, documenting expected workflows, success criteria, and edge cases to support evaluation of AI-assisted pricing logic.
- Conducted large scale online market research with **100+** posts, and conducted interviews with **3–4** automotive recyclers and repair businesses to gather user feedback.

E-Commerce & Shopify Toronto, ON
Freelance E-Commerce Developer August 2024 – Present

- Designed and customized **70+** Shopify product pages across **5+** e-commerce brands, focusing on product presentation, customer experience, **SEO,** and conversion-oriented layouts
- Created product pages, ad campaigns, and digital storefront assets for businesses ranging from small brands to an established retailer generating over **$1M** in sales..
- Implemented front-end code changes using **Shopify Liquid**, **HTML/CSS**, and **JavaScript** while customizing themes and optimizing product page layouts for client brands.
- Built **10+** brand identity systems including logos, and visual direction for **3+** businesses, and created **50+** digital advertising creatives, all using **Canva** and **Photoshop** for **Meta** advertising campaigns, aligning advertising materials with product positioning and customer acquisition goals.

PROJECTS

BrewOS (Espresso ESP32 Microcontroller System) May 2026 – Present

- Building an **IoT-based** espresso extraction monitoring system using an **ESP32 microcontroller**, integrating embedded hardware, software communication, and data visualization components
- Disassembled and repaired the espresso machine, replacing worn components to prepare the system for hardware modifications, developing firmware in **ESP-IDF** to collect sensor data and transmit it for analysis, planning **cloud-based** data storage and visualization in the form of a dashboard for comparing extraction profiles over time.

Rabbit Hole (Social Reading & Discovery Platform) August 2026 – Present

- Designing a **concept-based recommendation system** that models books through granular themes, cultural influences, settings, tone, and narrative elements to generate increasingly personalized recommendations from user ratings, preferences, and interactions.
- Building the application with **React, Expo, TypeScript, Supabase, and PostgreSQL**, including authentication, relational data modeling, external book APIs, and a personalized feed integrating book recommendations with user-generated posts and threaded discussions.
- Implementing a scalable development workflow using **Git/GitHub,** with plans to incorporate semantic search and vector embeddings, as well as automated testing, CI/CD, application security as the recommendation system evolves.

EDUCATION

TORONTO METROPOLITAN UNIVERSITY Toronto, ON
Bachelor of Engineering Expected May 2030
Major in Computer Engineering
